

Evaluating Climate Change Adaptation Responses

Criteria	Question	Explanation
Impact on climate change risk	Will climate change risk be reduced by implementing this intervention?	This will need two options – large impact and low impact – versus just a yes or no.
Other benefits/ opportunities	Will other benefits or opportunities be created when the intervention is implemented?	For instance a community reforestation project would create more green jobs than an afforestation project using professional contractors.
Ease of implementation	How easy will it be to implement this intervention?	Key issues to consider here are institutional complexity, available budget, human resource capacity etc
Flexibility	Is the intervention flexible?	Things change over time, and so does our understanding of what is appropriate in terms of climate change response. It's important that interventions are flexible and can be changed if necessary.

Suggested climate change adaptation intervention	Impact on climate risk (Low, medium or high impact in reducing risk)	Other benefits and opportunities (Yes/no and describe what these are)	Ease of implementation (Rank on scale of 1 – 5: 1 = easy; 5 = difficult)	Is the intervention flexible? (Yes or No)
